EDUCATION

British Columbia Institute of Technology   **Expected April 2026**
Full-Stack Web Development   *Vancouver, BC*
Relevant Courses: Agile Software Development, Data Structures, Algorithms, Databases, Operating Systems, Object-Oriented Programming.

TECHNICAL SKILLS

Languages: JavaScript, SQL, HTML & CSS, C#, Java, Bash, Rust.
Technologies: Git, Node.js, React.js, TypeScript, Tailwind, PostgreSQL, Prisma, Express.js, Redis, Tauri, Electron.
Tools: Jira, Github, Trello, Vite, Notion, Vercel, Firebase.

EXPERIENCE

Seaspan Corp   **May. 2024 - Aug. 2024**
Application Support Intern   *Vancouver, BC*
- Diagnosed and resolved application errors by analyzing system logs , error messages, and user-reported data.
- Managed user support requests via Jira Service Desk: triaged, categorized, and prioritized 100+ tickets, escalating critical issues to senior engineers and maintaining 97% SLA compliance.
- Monitored and maintained infrastructure health by conducting routine checks on servers (Windows), SQL databases, and REST APIs, ensuring 99.9% uptime for critical systems.
- Collaborated with IT teams to resolve a global CrowdStrike outage, restoring access for 1,300+ employees across 5 time zones.

The Victor   **June 2024 - Current**
Cook   *Vancouver, BC*
- Team Collaboration: Worked closely with servers, sous chefs, and managers in a dynamic team to deliver 200-400+ daily orders, aligning workflows to meet tight deadlines. (Mirrors Agile teamwork in software development).
- Thrived in high-pressure, fast-paced environments by prioritizing tasks and troubleshooting unexpected issues (e.g., equipment failures, last-minute orders), ensuring seamless service during peak hours.
- Consistently followed complex recipes with exact measurements and plating standards, minimizing errors and waste. (Analogous to writing clean, efficient code and debugging.)

PROJECTS

DayFlow | React, Typescript, Rust, Tauri, SQLite, Github Actions   **June 2025 | Github Link | Production Deployment**
- Engineered a cross-platform desktop productivity application using Tauri and Rust, demonstrating advanced systems programming and modern desktop development expertise. Implemented SQLite database integration, automated CI/CD pipelines with GitHub Actions, and cross-platform binary compilation, delivering native performance across Windows, macOS, and Linux with modern UI/UX design

Circles | Next.js, React, Prisma PostgreSQL, Redis, Tailwind   **May 2025 | Github Link | Production Deployment**
- Developed an advanced social media application with Next.js, TypeScript, and PostgreSQL, showcasing full-stack expertise through complex database design, real-time features, performance optimization with Redis caching, and enterprise-grade image processing. Demonstrated production-ready development skills including authentication systems, API design, and scalable architecture patterns.

Affistash | Next.js , Typescript, Firebase, Stripe, Sass CSS, OpenAI API   **March 2024 | Production Deployment**
- Worked in a team of 4 to develop Affistash, an AI-powered SaaS platform (Next.js, TypeScript, Firebase) connecting affiliate marketers with companies, utilizing OpenAI for strategy generation and Stripe for payments to optimize partnerships and drive results.
